

The listing of claims will replace all prior versions, and listings of claims in the application:

**Listing of Claims:**

1. (Currently Amended) ~~A method comprising: In a system comprising a terminal, including a display and a network, the terminal using a browser to communicate with a network during a terminal session comprising at least one communication operation initiated by a user and transmitted to the network, a method comprising:~~

receiving, at a server operatively connected to a terminal through a network, a plurality of individual communication operations transmitted from a browser installed on the terminal; initiating a terminal session with a browser by making a transmission to the network;

the network, comprising a server which determines; determining, at the server, a level of trust for each of the plurality of individual communication operations received from the terminal, in response to initiation of the terminal session;

providing information from the network-server to the browser relating to at least one communication operation; the terminal session; and

displaying on the display on the terminal a level of trust, informing the user of a level of security determined to be associated with the at least one communication operation if the at least one communication operation is permitted by the user to be transmitted to the network based upon a comparison of the at least one communication operation to a standard prior to transmission to the network, and wherein based upon the displayed level of trust the terminal is configured to receive an input for the user decides to accepting or rejecting the at least one communication operation based on the displayed level of trust.

2. (Previously Presented) A method in accordance with claim 1 wherein:  
terminal is a mobile terminal; and

the at least one communication operation comprises wireless transmissions between the mobile terminal and an entity in the network.

3. (Previously Presented) A method in accordance with claim 1 comprising:

displaying a level of trust of each communication operation; and  
wherein each level of trust is based at least in part upon technology in the network which is involved with each communication operation associated with the displayed level of trust.

4. (Previously Presented) A method in accordance with claim 2 wherein:  
displaying a level of trust of each communication operation; and  
wherein each level of trust is based at least in part upon technology in the network which is involved with each communication operation associated with the displayed level of trust.

5 – 16. (Cancelled)

17. (Previously Presented) A method in accordance with claim 1 wherein:  
the server determines a level of trust of each communication operation based at least in part on technology of the network associated with the network providing each communication operation.

18. (Currently Amended) A method in accordance with claim 17 wherein:  
level of trust is also at least in part dependent upon at least one additional attribute the network used in processing the communication operation.

19. (Currently Amended) A method in accordance with claim 18 wherein:  
the at least one additional attribute is at least one of reliability of an operator of a server offering a service during the session through the browser to the user or commercial viability of an offer of service made to the user during the session through the browser.

20. (Previously Presented) A method in accordance with claim 2 wherein:  
the server determines a level of trust of each communication operation based at least in part on technology of the network associated with the network providing each communication operation.

21. (Currently Amended) A method in accordance with claim 20 wherein:

level of trust is also at least in part dependent upon at least one additional attribute the network used in processing the communication operation.

22. (Currently Amended) A method in accordance with claim 21 wherein:

the at least one additional attribute is at least one of reliability of an operator of a server offering a service during the session through the browser to the user or commercial viability of an offer of service made to the user during the session through the browser.

23 – 40. (Cancelled)

41. (Original) A system in accordance with claim 1 wherein:  
display of the level of trust is a graphic presentation.

42. (Original) A system in accordance with claim 1 wherein:  
display of the level of trust is a numerical value.

43. (Currently Amended) A system comprising:  
a terminal including a display;

a network comprises a server which determines a level of trust of each of a plurality of communication operations to which the terminal is coupled via a communication link; and wherein the terminal uses a browser to communicate with the network server during a terminal session comprising at least one communication operation from the browser is received at the server~~initiated by a user and transmitted to the network with the terminal session being initiated with the browser by making a transmission to the network~~, the network, ~~in response to initiation of the terminal session~~, provides information from the network to the browser relating to the terminal session, and the display displays a level of trust ~~informing the user of~~ providing a level of security determined to be associated with the at least one communication operation ~~if the at least one communication operation is permitted by the user to be transmitted to the network based upon a comparison of the at least one communication operation to a standard prior to transmission to the network~~ informing the user of a level of security determined to be associated with the at least one communication operation if the at least one

~~communication operation is permitted by the user to be transmitted to the network;~~ and the terminal comprises means for used by the user to accepting or rejecting the at least one communication operation based upon comparison of the displayed level of trust.

44. (Previously Presented) A system in accordance with claim 43 wherein:

terminal is a mobile terminal; and

the at least one communication operation comprise wireless transmissions between the mobile terminal and an entity in the network.

45. (Previously Presented) A system in accordance with claim 43 wherein: a level of trust is displayed by the display of each communication operation; and

each level of trust is based at least in part upon technology in the network which is involved with each communication operation associated with the displayed level of trust.

46. (Previously Presented) A system in accordance with claim 44 wherein: a level of trust is displayed by the display of each communication operation; and

each level of trust is based at least in part upon technology in the network which is involved with each communication operation associated with the displayed level of trust.

47 – 59. (Cancelled)

60. (Previously Presented) A system in accordance with claim 43 wherein:

the server determines a level of trust of each communication operation based at least in part on technology of the network associated with the network providing each communication operation.

61. (Currently Amended) A system in accordance with claim 60 wherein:

the level of trust is also at least in part dependent upon at least one additional attribute of the communication operation which is not related to technology of the network used in processing each communication operation.

62. (Currently Amended) A system in accordance with claim 61 wherein:

the at least one additional attribute is at least one of reliability of an operator of a server offering a service during the session through the browser to the user or commercial viability of an offer of service made to the user during the session through the browser.

63 – 71. (Cancelled)

72. (Previously Presented) A system in accordance with claim 43 wherein:

the network comprises a server and the terminal comprises a processor, wherein the server provides information about processing of each communication operation by the network to the processor and the processor in response to the information determines the level of trust which is displayed by the display and the processor determines a level of trust of each communication operation based at least in part on technology of the network associated with the network providing each communication operation.

73. (Previously Presented) A system in accordance with claim 72 wherein:

the level of trust is also at least in part dependent upon at least one additional attribute each communication operation which is not dependent upon technology of the network associated with the network providing each communication operation.

74. (Currently Amended) A system in accordance with claim 73 wherein:

the at least one addition attribute is at least one of reliability of an operator of a server offering a service during the session through the browser to the user or commercial viability of an offer of service made to the user during the session through the browser.

75. – 83. (Cancelled)

84. (Original) A system in accordance with claim 43 wherein:  
display of the level of trust is a graphic presentation.

85. (Original) A system in accordance with claim 43 wherein:  
display of the level of trust is a numerical value.

86 – 95. (Cancelled).
